***Mentis Technology Solutions Introduces aiSMARTBENCH™, Its Game Changing, In-Courtroom Solution at the Court Technology Conference in Long Beach, CA***

Posted: Monday, October 3, 2011

[Mentis Technology Solutions](#), a privately held software firm providing intelligent automation of document-driven processes for business and government, announced today its game changing, in-courtroom solution, [aiSMARTBENCH™](#). Inspired by judges and developed for judges, aiSMARTBENCH™ transforms the traditional courtroom workflow with efficiencies that exceed the current paper processes.

"aiSMARTBENCH™ inspired by the "Manatee Model" provides another critical building block in our efforts to create a paperless court environment." said R.B. "Chips" Shore, Manatee Clerk Circuit Court and Comptroller. "The aiSmartBench designed by judges in our circuit is a solution that enables our Judges to quickly and effectively manage cases in the courtroom as quickly and as easily as paper files. In doing so, we have been able to better serve our customers by redirecting staffing resources, which previously spent hours a day preparing paper files for the courtroom, to other areas in our office. At a time when our court system is faced with increasing demands and decreasing funds, aiSMARTBENCH™ helps us to meet these challenges."

aiSMARTBENCH™ allows judges, magistrates, case managers, clerks and judicial assistants to securely perform high-speed, full-text searches within a particular document or across all documents for a particular case while in the courtroom, in chambers, at home, or on the road. Because aiSMARTBENCH™ works with any case or document management system, it offers a single interface to those judges rotating through different court divisions or jurisdictions. Judges get the solution they need while leveraging the existing court infrastructure already in place.

*"For the first time, judges and judicial personnel have a solution designed just for them." said Leo LaCascia, Mentis' founder and President. " aiSMARTBENCH™ was created to match the fast-paced courtroom giving 'single-touch access' to critical information. Because we learned that no judge runs his or her courtroom like any other judge, we gave the judge the ability to customize their own workspace based on their individual*

*preferences for a particular court division or case type. For the first time, an in-court system delivers compelling features to judges so they can embrace a paper-free courtroom and realize the vision that was started with e-filing and case management systems."*

Mentis Technology collaborated with the 12th Judicial Circuit of Florida and the Manatee County Clerk of the Circuit Court in Florida to develop a secure internet-based, in-courtroom solution tailored for judges. See the [Manatee Model™](#). The vision which inspired aiSmartBench™ is presented and narrated by Hon. Lee E. Haworth, Chief Judge, 12th Judicial Circuit of Florida, in conjunction with Hon. R.B. "Chips" Shore, Clerk of Courts, Manatee County Florida and the Judges of the 12th Judicial Circuit of Florida.
